

Congratulations!

We look forward to assisting you with your self-care regimen!

Angioma / Capillary Laser Treatment

PRE-TREATMENT

- Please avoid sun exposure and self tanning creams x 1 week prior to procedure.

POST-TREATMENT

Angioma

- The lesion will be black immediately after treatment.
- The lesion will blister and/or scab over the next 5-7 days and then fall off within 14 days.

Capillaries

- The treatment area may swell significantly and/or darken and can last for up to 5 days.
- Pustules might develop in the treatment area and this is normal.

AFTERCARE

- No "blushing or flushing" x 24 hours. This includes exercise, extreme heat and UV sun exposure, eating spicy foods, or engaging in sexual intercourse.
- DO NOT pick at any scabs, pop any pustules or exfoliate over the treated area.
- For swelling: place ice on the area for 5-10 minutes at a time, three times daily for 5 days. Take ibuprofen as needed.
