

Congratulations!

We look forward to assisting you with your self-care regimen!

DiamondGlow®

PRE-TREATMENT

- Avoid unprotected sun exposure. Sunburned skin cannot be treated.
- This procedure may not be performed over open lesions or compromised skin.

POST-TREATMENT

- You may experience mild erythema (redness), especially on the neck for 1-2 hours following your treatment.
- You may apply make-up immediately post-treatment.
- You can resume your normal skincare regimen the night of your treatment. Your skin can sometimes be more sensitive to your regular products due to the microdermabrasion and this is completely normal. Please let us know if this lasts longer than 48 hours.
- You may experience an acne breakout following your treatment, as the skin can purge impurities. This will self-resolve and often does not occur again with regularly scheduled DiamondGlow® treatments.
